

## Alihi Lani 1 – Wifi INFO

We have 3 different wifi connections:

There are 2 cable connections which should be the best connections:

AL1 wide – this is not as strong as ‘al1 strong’ but will reach further, like to the pool deck

– pw should be 6509401067

**\* if \*** the power goes out, sometimes the modem will reset to the default name and pw which is: default - my spectrum wifi d4-2G and the PW is littleroad082

AL1 strong - this is stronger than ‘al1 wide’ but doesn’t reach as far

- pw 6509401067 my spectrum wifi 88-5G

**\* if \*** the power goes out, sometimes the modem will reset to the default name and pw which is: my spectrum wifi d4-5G and the PW is littleroad082

The cable modem boxes are usually in the front bedroom in the dresser top area open shelves.

There is a 3<sup>rd</sup> connection called AL1 (or maybe Alihi Lani1). This is the older and probably slower HawaiianTel connection. PW should be: 6509401067. But if we lose our cable connection (which happens!) hopefully this will work as a back up. This modem is usually by the phone in the kitchen

Questions? Call me. Thanks.

Cynthia
