Outside shades – Instructions

These are multi-purpose shades. Sun, rain and wind! Most likely you will use them for sun, but if there is a storm, please put them down so that the furniture on the lanai doesn't get overly soaked. Same if there is any kind of heavy winds. Please put down.

Unit 4 has 4 shades in the front and 1 in the back on the sliding door in the bedroom.

1 remote controls all 5 shades.

As you are standing inside the condo looking out - #1 is on the left most side, #2 in the middle, #3 on the right side of the lanai #4 is the large picture window on the side of the living room/desk area. #5 is the back bedroom shade.

To pick the shade you want to operate, click on the bottom blue button. The left most light is #1, then #2, then #3, then #4 and when all lights come on its for shade #5. Just keep pressing the button to move from one shade setting to the next.

Once you have selected the shade you want to operate, press the down arrow to go down and the up arrow to go up.

Press 'MY' to stop the shade from moving.
